## Replacement Electronic Controls For Parker, Thiem and Whittaker Water Detector Systems - UL Listed -

F716  
 Before

F716  
 After

In the handling of aviation fuels, water is a constant concern. Many refueler vehicles and fuel farm filter separators are equipped with the Parker Water Detector System. That system was been manufactured by Parker, Thiem and (most recently) by Whittaker Ground Fueling Products.

Recently, Whittaker decided to no longer manufacture the system, and turned over the support of these older systems to us here at Gammon Technical Products. We have developed much more modern and less expensive controls that can be retro fitted into the existing control boxes, both explosion-proof and weather tite. The same water detector probes are used because they are fully compatible.

These new replacement electronics system include better voltage regulation and are fully UL listed They are Intrinsically Safe for use in Class 1 Division 1 Group C and D Explosion Proof environments. The old controls did not carry any certifications.

We offer complete kits with mounting hardware and replacement controls for all of the old control systems for 12 VDC, as well as 120 and 220 VAC, 50/60 hz power. We also offer combination controls which also add deadman controls, which are also Intrinsically Safe.

System Part Number	Complete kit	Control Unit
F718 120 VAC	GTP-9318	GTP-9278-3
F717 120 VAC	GTP-9317	GTP-9278-4
F716 12 VDC	GTP-9310	GTP-9278
